The incgraph package

Manual for version 1.3.0 (2024/03/14)

Thomas F. Sturm¹

https://www.ctan.org/pkg/incgraph https://github.com/T-F-S/incgraph

${\bf Abstract}$

incgraph provides tools for including graphics on full paper size. The graphics can be centered for a given paper format or the paper may be resized to the graphics dimensions. The main use case for the package incgraph is to transform one or many scans or taken pictures to a PDF document. It can also be applied for full paper size LaTeX created graphics. The package incgraph provides a tool box with basic macros and a convenience user interface which wraps the well-known includegraphics. Also, bookmarking is especially supported.

Caveat — Page 3 — This documentation contains a lot of effects which can only be seen when viewed

on a computer screen. If you read this text on paper, you will not notice the paper resizing and the bookmarks. Also, pages in landscape may probably be rotated by your printer.

1 Introduction

1.1 Motivation

The main purpose of this package is to include one or more graphics on full paper size. This means that a graphic is either centered on a blank page presumable of the given document paper size or the page is resized to the dimensions of the graphic. For the graphics, JPG files or PDF files or other supported formats may be used by inclusion. Alternatively, the graphics (or whatever) can be produced by LATEX code. An important use case for the package incgraph is to transform one or many scans or taken pictures to a PDF document. Optionally, the included graphics can be commented with bookmarks for the resulting PDF document.

The well-known graphicx package [1] allows the inclusion of several types of external graphics files. The convenience user interface of incgraph described in Section 2 relies on this package and adds assistance for the described purpose. Note that the package is designed for and tested with pdflatex to produce PDF directly. Also, the package is intended to harmonize with lualatex. Some features like the paper resizing may not be applicable for other work-flows.

Many of the features of the convenience user interface can be used directly with various basic macros. These are collected and described as a 'basic tool box' in Section 5.

If this package does not aid your intended purpose, you may take a look at the pdfpages package [2] which also supports the insertion of external multi-page PDF documents.

1.2 Loading the Package

incgraph is loaded in the usual manner in the preamble:

\usepackage{incgraph}

The package incgraph loads the package pgfkeys [4]. If no options are given, it also loads the packages pgf, pgffor [4], the package graphicx [1], and the package bookmark [3].

The following package options are available:

pgf (no value, initially set)
nopgf (no value, initially unset)

The option nopgf prevents the loading of pgf and pgffor.

The opposite option pgf resets to loading the packages.

graphicx (no value, initially set)
nographicx (no value, initially unset)

The option nographicx prevents the loading of graphicx.

The opposite option graphicx resets to loading the package.

bookmark (no value, initially set)
nobookmark (no value, initially unset)

The option nobookmark prevents the loading of bookmark.

The opposite option bookmark resets to loading the package.

So, the minimal package loading is done with the following:

\usepackage[nopgf,nographicx,nobookmark]{incgraph}

Note that you can always load the mentioned packages yourself. This is intended to avoid possible option clashes the easy way.

2 User Interface

2.1 Inclusion Macros for External Graphics

The macros of this section rely on the \includegraphics command from the package graphicx [1].

The picture file with the given $\langle file\ name \rangle$ is included in the center of a separate page. Depending on the $\langle options \rangle$, this page keeps the document size or is resized to the graphics dimensions. The applicable $\langle options \rangle$ are listed in Section 3. If $\langle graphics\ options \rangle$ are given, these are added to the options for the underlying \includegraphics command. See the documentation of graphicx [1] for a list of applicable $\langle graphics\ options \rangle$.

Example 1: The hand-drawn example (centered); see page 19

\incgraph[paper=current,label={exacenter},overlay page number at bottom,
bookmark={The hand-drawn example (centered)}]{example.jpg}

Example 2: The hand-drawn example (resized page); see page 20

```
\incgraph[paper=graphics,label={exaresized},
bookmark={The hand-drawn example (resized page)}]{example.jpg}
```

Example 3: The hand-drawn example (rotated and oversized); see page 21

```
\incgraph[paper=current,label={exarotated},target=oversized,
  bookmark={The hand-drawn example (rotated and oversized)}]%
  [angle=30,scale=3]{example.jpg}
```

$\incmultigraph[\langle options \rangle] [\langle graphics\ options \rangle] {\langle file\ name\ pattern \rangle} {\langle list \rangle}$

All picture files matching the given $\langle file\ name\ pattern \rangle$ where some parts are substituted by elements of the $\langle list \rangle$ are included in the center of a separate page. Depending on the $\langle options \rangle$, the pages keep the document size or are resized to the graphics dimensions. The applicable $\langle options \rangle$ are listed in Section 3. If $\langle graphics\ options \rangle$ are given, these are added to the options for the underlying \includegraphics command. See the documentation of graphicx [1] for a list of applicable $\langle graphics\ options \rangle$.

The $\langle list \rangle$ may contain any construction allowed for the \foreach statement [4], especially a list of numbers. The elements of the list can be used inside the $\langle file\ name\ pattern \rangle$ with the following macros:

- \n: The current element of the list (may be a number).
- \ni: The position of the current element inside the list, i.e. \ni counts from 1 to the size of the list.
- \nn: The zero-filled \n, if \n is a number. The digit number of \nn is determined by /igr/zerofill \(^{\text{P.}} 18\).

The resolved $\langle file\ name\ pattern \rangle$ is stored inside the macro:

• \nt: This file name may be used for bookmarking. In the default behavior, non existing files are ignored.

Example 4: A series of pictures; see from page 22. The image files exaimage-0001.png to exaimage-0150.png are included but only three of them exist.

```
\incmultigraph[zerofill=4,bookmark={A series of pictures: \nt},
    paper=current,label={exaseries.\n}]{exaimage-\nn.png}{1,...,150}
```

2.2 Inclusion Macro for Internal Graphics

```
\begin{inctext} [\langle options \rangle] \langle environment content \rangle \end{inctext}
```

The environment content is included in the center of a separate page. Depending on the $\langle options \rangle$, this page keeps the document size or is resized to the content dimensions. The applicable $\langle options \rangle$ are listed in Section 3.

```
Example 5: Some text on a shrunk paper; see page 25

\begin{inctext}[paper=graphics,label={inctext1},bookmark={A huge ABC}]
  \fontsize{20mm}{20mm}\selectfont\bfseries ABC
\end{inctext}
```

```
Example 6: A tikzpicture as text content; see page 26
\begin{inctext} [paper=a6,landscape,label={inctext2},bookmark={Graph},
    overlay page number at bottom=8mm]
  \begin{tikzpicture}[zustand/.style={circle,fill=Gold,draw},scale=2]
  \draw node[zustand] (s0) {\$s_0\$}
    +(30:3cm) node[zustand] (s1) {$s_1$}
    ++(-30:3cm) node[zustand] (s2) {$s_2$}
    +(30:3cm) node[zustand] (s3) {$s_3$};
  \path[very thick,-latex]
    (s0) edge node[above left] {a} (s1)
    edge node[below left] {b} (s2)
    (s1) edge[out=-120,in=120] node[left] {b} (s2)
    edge node[above right] {a} (s3)
    (s2) edge[out=60,in=-60] node[right] {a} (s1)
    edge node[below right] {b} (s3);
  \end{tikzpicture}
\end{inctext}
```

2.3 (Global) Option Setting

$\ightharpoonup \ \ightharpoonup \ \igh$

Sets options for $\incgraph^{\to P.5}$, $\incmultigraph^{\to P.5}$, and inctext inside the current TEX group. For example, the options $\incgraph^{\to P.7}$ and $\incgraph^{\to P.5}$ may be defined for the whole document by this:

```
\igrset{paper=current,zerofill=3}
```

3 Option Keys

3.1 Paper (Media) Size

/igr/currentpaper

The paper size keeps unchanged at the current size except if /igr/landscape is used. The current paper size has not to be the document paper size. See page 19 for the output of Example 1 on page 5.

/igr/documentpaper

(no value)

(no value)

The paper size is set to the initial document paper size.

/igr/graphicspaper

(no value, initially set)

The paper is resized to the dimensions of the included image. The /igr/landscape option is ignored for this paper. See page 20 for the output of Example 2 on page 5.

/igr/paper size= $\langle width \rangle$: $\langle height \rangle$

(no default)

The paper is resized to the given $\langle width \rangle$ and $\langle height \rangle$.

/igr/paper= $\langle name \rangle$

(no default)

The paper size is chosen according to the given $\langle name \rangle$. Feasible values for the $\langle name \rangle$ are current, document, graphics, a0, a1, a2, a3, a4, a5, a6, a7, a8, a9, a10, b0, b1, b2, b3, b4, b5, b6, b7, b8, b9, b10, c0, c1, c2, c3, c4, c5, c6, c7, c8, c9, c10, d0, d1, d2, d3, d4, d5, d6, d7, executive, letter, legal, ledger.

/igr/landscape

(no value)

If set the width and height of the chosen paper are switched. Note that this turns the paper by 90 degrees but the contents of the paper is not turned.

/igr/portrait

(no value, initially set)

Disables the /igr/landscape mode.

/igr/a0paper

(no value)

The paper size is set to $841 \text{mm} \times 1189 \text{mm}$.

/igr/a1paper

(no value)

The paper size is set to $594mm \times 841mm$.

/igr/a2paper

(no value)

The paper size is set to $420mm \times 594mm$.

/igr/a3paper

(no value)

The paper size is set to $297mm \times 420mm$.

/igr/a4paper

(no value)

The paper size is set to $210mm \times 297mm$.

/igr/a5paper

(no value)

The paper size is set to 148mm \times 210mm.

/igr/a6paper

(no value)

The paper size is set to $105 \text{mm} \times 148 \text{mm}$.

/igr/a7paper

(no value)

The paper size is set to $74mm \times 105mm$.

/igr/a8paper

(no value)

The paper size is set to $52mm \times 74mm$.

/igr/a9paper

(no value)

The paper size is set to $37mm\,\times\,52mm.$

The perper size is set to Crimin // Czimin	
/igr/a10paper	(no value)
The paper size is set to $26mm \times 37mm$.	
/igr/b0paper	(no value)
The paper size is set to $1000mm \times 1414mm$.	
/igr/b1paper	(no value)
The paper size is set to $707mm \times 1000mm$.	
/igr/b2paper	(no value)
The paper size is set to $500mm \times 707mm$.	
/igr/b3paper	(no value)
The paper size is set to $353mm \times 500mm$.	
/igr/b4paper	(no value)
The paper size is set to $250mm \times 353mm$.	
/igr/b5paper	(no value)
The paper size is set to $176mm \times 250mm$.	
/igr/b6paper	(no value)
The paper size is set to $125mm \times 176mm$.	
/igr/b7paper	(no value)
The paper size is set to $88mm \times 125mm$.	
/igr/b8paper	(no value)
The paper size is set to $62mm \times 88mm$.	
/igr/b9paper	(no value)
The paper size is set to $44\text{mm} \times 62\text{mm}$.	
/igr/b10paper	(no value)
The paper size is set to $31mm \times 44mm$.	
/igr/c0paper	(no value)
The paper size is set to $917mm \times 1297mm$.	,
/igr/c1paper	(no value)
The paper size is set to $648mm \times 917mm$.	
/igr/c2paper	(no value)
The paper size is set to $648mm \times 917mm$.	(1)
/igr/c3paper The paper size is set to 204mm \(450mm	(no value)
The paper size is set to $324mm \times 458mm$.	(1)

The paper size is set to 162mm × 229mm.	(*** 1)
/igr/c6paper The paper size is set to $114mm \times 162mm$.	(no value)
	(no reluc)
/igr/c7paper The paper size is set to $81mm \times 114mm$.	(no value)
The paper bize is set to orimin A TITHIII.	

/igr/c8paper	(no value)
The paper size is set to $57mm \times 81mm$.	
/igr/c9paper	(no value)
The paper size is set to $40\text{mm} \times 57\text{mm}$.	
/igr/c10paper	(no value)
The paper size is set to $28mm \times 40mm$.	
/igr/d0paper	(no value)
The paper size is set to $771mm \times 1091mm$.	
/igr/d1paper	(no value)
The paper size is set to $545mm \times 771mm$.	
/igr/d2paper	(no value)
The paper size is set to $385mm \times 545mm$.	
/igr/d3paper	(no value)
The paper size is set to $272mm \times 385mm$.	
/igr/d4paper	(no value)
The paper size is set to $192mm \times 272mm$.	
/igr/d5paper	(no value)
The paper size is set to $136mm \times 192mm$.	
/igr/d6paper	(no value)
The paper size is set to $96mm \times 136mm$.	
/igr/d7paper	(no value)
The paper size is set to $68mm \times 96mm$.	
/igr/executivepaper	(no value)
The paper size is set to $7.25in \times 10.5in$.	
/igr/letterpaper	(no value)
The paper size is set to 8.5 in \times 11in.	
/igr/legalpaper	(no value)
The paper size is set to 8.5 in \times 14in.	
/igr/ledgerpaper	(no value)
The paper size is set to $17in \times 11in$.	
/igr/center	(no value, deprecated)
An alias for /igr/currentpaper → P. 7.	
/igr/page	(no value, deprecated)
An alias for $/igr/graphicspaper^{\rightarrow P.7}$.	

3.2 Graphics Inclusion

$/igr/options={\langle graphics \ options \rangle}$

(no default, initially empty)

The $\langle graphics \ options \rangle$ are applied to the underlying \includegraphics command. See the documentation of graphicx [1] for a list of applicable $\langle graphics \ options \rangle$.

```
Example 7: A resized image; see page 27

\igrset{options={width=10cm,height=10cm}, paper=graphics,
    overlay page number at top=5mm
    }

\incgraph[bookmark={A resized image}, label={exagraphresize}]%
    {exaimage-0037.png}
```

```
/igr/options add=\{\langle graphics \ options \rangle\}
```

(no default, initially empty)

The $\langle graphics \ options \rangle$ are added to the current list of options for the underlying $\$ includegraphics command.

```
/igr/include command=\langle macro \rangle
```

(default and initially \includegraphics)

Replaces the internally used $\$ includegraphics command by the given $\langle macro \rangle$. Note that $\langle macro \rangle$ has to have the same signature as $\$ includegraphics, i. e. it has to take two arguments where the first argument is optional.

```
/igr/existence check=\langle macro \rangle
```

(no default)

Replaces the internally used **\IffileExists** (in truth **\file_if_exist:nTF**) command by the given $\langle macro \rangle$. Note that $\langle macro \rangle$ has to have the same signature as **\IffileExists**, i.e. it has to take three arguments.

N 2021-10-16

```
/igr/no existence check (no value)
/igr/fail on not found (no value)
```

Omits any existence checks by the package, i.e. the underlying \includegraphics is called directly and may stop the compilation with an error if the included file does not exist. Both options are equal, but the newer /igr/no existence check is considered to be more comprehensible.

```
/igr/ignore on not found
```

(no value, initially set)

Not existing included files are ignored without warning. This is the default setting and is intended to be used with fragmentary file lists.

```
N 2021-10-16
             /igr/ignore on not found with extensions=\{\langle extension \ list \rangle\}
                                                                                                          (initially unset)
N 2021-10-16
             /igr/ignore on not found with extensions*=\{\langle extension \ list \rangle\}
                                                                                                          (initially unset)
```

Tests, if the included file with an added extension exists and performs the inclusion on existence. Otherwise, included files are ignored without warning. Tested extensions are taken from the optional comma separated (extension list) or (exclusively) from the configured list from /igr/extensions and friends (only, if $\langle extension \ list \rangle$ is not given).

/igr/ignore on not found with extensions* also tests, if the included file without added extension exists and takes it on existence.

Note that if a file is included with a given extension, this extension is not replaced by the listed extension, but prolonged with it.

These options are intended for mixed file lists, e.g. .jpg and .png, or unkown type file lists. Note that if you know the (singular) extension of your files, you are encouraged to use /igr/ignore on not found P.10 instead for performance reasons.

```
\incmultigraph[ignore on not found with extensions={.jpg,.png}]{myfile\n}{1,...,100}
  % includes e.g. `myfile1.jpg`, `myfile2.png`, `myfile42.jpg`, ...
\incmultigraph[ignore on not found with extensions={.jpg,.png}]{myfile\n.xy}{1,...,100}
  % includes e.g. `myfile1.xy.jpg`, `myfile2.xy.png`, `myfile42.xy.jpg`, ...
\incgraph[ignore on not found with extensions={.jpg,.png}]{myfile}
  % tests `myfile.jpg` and `myfile.png` for existence (and inclusion)
\incgraph[ignore on not found with extensions*={.jpg,.png}]{myfile}
  % tests `myfile`, `myfile.jpg`, and `myfile.png` for existence (and inclusion)
\incmultigraph[ignore on not found with extensions]{myfile\n}{1,...,100}
  % includes files with extensions given by /igr/extensions
```

N 2021-10-16 $/igr/extensions = {\langle extension \ list \rangle}$

(initially .jpg,.png)

Specifies a comma separated (extension list) to be used in combination with /igr/ignore on not found with extensions.

N 2021-10-16

/igr/extensions add= $\{\langle extension \ list \rangle\}$

(initially unset)

Adds a comma separated (extension list) to an already defined list from /igr/extensions.

N 2021-10-16 /igr/extensions from graphics

(initially unset)

Takes the list of extensions from \DeclareGraphicsExtensions of the graphics [1] package as setup for /igr/extensions. While this looks like the most comfortable options, this can significantly increase compilation time when used for fragmentary file lists, because every non-existing file from the file list will induce a lot of existence checks. Also note that this options uses internals from graphics and is not guaranteed to work with future versions of graphics.

3.3 Hypertargets, Labels, and Bookmarks

/igr/hyper (no value, initially set)

An automated hyper target is set to the current image. The hyper target is placed at the top left corner of the page. It is used internally, when a bookmark is added.

/igr/no hyper (no value)

No automated hyper target is set to the current image. Use this option, if the package bookmark is not included.

$/igr/target=\langle anchor \rangle$ (no default)

The next hypertarget destination value is set to $\langle anchor \rangle$ instead of an automatically created value. This may be used for hyperlinks.

This is linked to the oversized example (click me). The target value 'oversized' was defined in Example 3, see page 5.

```
/igr/label=\langle text \rangle (no default, initially empty)
```

Adds a LATEX label to the included image.

```
/igr/bookmark=\langle text \rangle
```

(no default, initially empty)

Adds a PDF bookmark with the given $\langle text \rangle$ to the current image.

```
\/\igr/bookmark options = \{\langle bookmark options \rangle\}
```

(no default, initially empty)

Sets the options for a bookmark. See the documentation of bookmark [3] for a list of applicable $\langle bookmark\ options \rangle$.

```
Example 8: Bookmark options; see page 28
```

```
/igr/bookmark heading=\langle text \rangle
```

(no default, initially empty)

For $\inc multigraph^{\to P.5}$, an additional bookmark with the given $\langle text \rangle$ is set as a heading before the images are included.

Example 9: A series of pictures; see from page 29

```
\incmultigraph[zerofill=4,currentpaper,
  bookmark heading={A series of pictures},
  bookmark heading options={level=subsection},
  bookmark={\nt},bookmark options={level=subsubsection},
  overlay page number at bottom,
  label={exaheading.\n}]{exaimage-\nn.png}{1,...,150}
```

```
/igr/bookmark heading options=\{\langle bookmark \ options \rangle\}
```

(no default, initially empty)

Sets the options for a /igr/bookmark heading. See the documentation of bookmark [3] for a list of applicable \(\langle bookmark \ options \rangle \).

3.4 Autosize

N 2024-03-09

/igr/autosize=true|false

(default true, initially false)

If set to true, the picture box is resized to fit into the paper while keeping the aspect ratio. This setting has no effect for $/igr/graphicspaper^{\to P.7}$. Note that this autosize is applied after possible size and scaling options for $\identifont{linearize}{linearize}$ are conducted, see $\identifont{linearize}{linearize}$ and $\identifont{linearize}{linearize}$.

Example 10: Autosized pictures; see from page 32

```
\incmultigraph[zerofill=4, currentpaper, autosize,
bookmark heading={Autosized pictures},
bookmark heading options={level=subsection},
bookmark={\nt},bookmark options={level=subsubsection},
overlay page number at bottom,
label={autosize.\n}]{exaimage-\nn.png}{1,...,150}
```

The following tuning options influence how the resizing is done.

N 2024-03-09 N 2024-03-09 N 2024-03-09

```
/igr/autosize width gap=\langle length \rangle(no default, initially 0mm)/igr/autosize height gap=\langle length \rangle(no default, initially 0mm)/igr/autosize gap=\langle length \rangle(no default, initially 0mm)
```

 $\langle length \rangle$ is subtracted from the width or height of the current paper size to compute the target size for the automatic picture box scaling. /igr/autosize gap sets both values at the same time. For example, autosize gap=20mm gives (at least) 10mm space around the rescaled picture box.

Negative $\langle length \rangle$ values allow the picture box to extrude over the borders of the current paper.

N 2024-03-09 N 2024-03-09

```
/igr/autosize min scale=\langle floating-point\ expression \rangle(no default, initially 0.001)/igr/autosize max scale=\langle floating-point\ expression \rangle(no default, initially 1000)
```

The scale number of the automatic scaling will always be between /igr/autosize min scale and /igr/autosize max scale even if other settings are violated.

autosize min scale=1 means that the picture box is never to be shrunk. autosize max scale=1 means that the picture box is never to be enlarged.

3.5 Borders and Shifts

The following settings enlarge or shrink the picture box, if $/igr/graphicspaper^{\rightarrow P.7}$ is used. For other paper settings, the result will be a certain shift of the picture box since the enlarged box will be centered on the paper.

	* *	
N 2015-03-12	/igr/left border= $\langle length \rangle$	(no default, initially Opt)
U 2024-03-08	Adds a space of $\langle length \rangle$ at the left hand side.	
N 2015-03-12	/igr/bottom border= $\langle length \rangle$	(no default, initially Opt)
U 2024-03-08	Adds a space of $\langle length \rangle$ at the bottom.	
N 2015-03-12	/igr/right border= $\langle length \rangle$	(no default, initially Opt)
U 2024-03-08	Adds a space of $\langle length \rangle$ at the right hand side.	
N 2015-03-12	/igr/top border= $\langle length \rangle$	(no default, initially Opt)
U 2024-03-08	Adds a space of $\langle length \rangle$ at the top.	
N 2015-03-12	/igr/horizontal border= $\langle length angle$	(no default, initially Opt)
U 2024-03-08	Adds a space of $\langle length \rangle$ at the left hand side and the right	hand side.
N 2015-03-12	/igr/vertical border= $\langle length angle$	(no default, initially Opt)
U 2024-03-08	Adds a space of $\langle length \rangle$ at the top and bottom.	
N 2015-03-12	/igr/border= $\langle length \rangle$	(no default, initially Opt)
U 2024-03-08	Adds a space of $\langle length \rangle$ at all four sides.	
N 2024-03-08	/igr/xshift= $\langle length \rangle$	(no default, initially Opt)
	Shifts the picture box in horizontal direction without changi	ng the paper size. This adapts
	the current values of /igr/left border and /igr/right option after the border values are set.	border. Therefore, use this
N 2024-03-08	$/igr/yshift=\langle length \rangle$	(no default, initially Opt)
	Shifts the picture box in vertical direction without changing	the paper size. This adapts the
	current values of /igr/top border and /igr/bottom bord after the border values are set.	er. Therefore, use this option

3.6 Map and Match

```
/igr/set matches=\{\langle list \rangle\}
```

(no default, initially empty)

The $\langle list \rangle$ is a comma separated list of $\langle key \rangle = \langle value \rangle$ pairs. For every pair, the given $\langle key \rangle$ is mapped to the given $\langle value \rangle$. Later, this $\langle value \rangle$ can be retrieved by /igr/if match code, /igr/if match set, and /igr/if match set bookmark.

```
\igrset{set matches={
  foo = bar,
    1 = A very red image,
    37 = A not so centered number,
    123 = A greenish example}}
```

```
/igr/if match code=\{\langle key \rangle\} \{\langle then \rangle\} \{\langle else \rangle\}
```

(no default)

If the $\langle key \rangle$ was defined by /igr/set matches, \igrsetmatchvalue^{\rightarrow P.53}, or \igrsetmatches^{\rightarrow P.53}, the corresponding value is put in the macro \igrmatchvalue and the $\langle then \rangle$ code is executed. If the $\langle key \rangle$ is unknown, the $\langle else \rangle$ code is executed.

```
/igr/if match set=\{\langle key \rangle\}\{\langle then \rangle\}\{\langle else \rangle\}
```

(no default)

If the $\langle key \rangle$ was defined by /igr/set matches, \igrsetmatchvalue^{\rightarrow P.53}, or \igrsetmatches^{\rightarrow P.53}, the corresponding value is put in the macro \igrmatchvalue and \igrset{ $\langle then \rangle$ } is executed. If the $\langle key \rangle$ is unknown, \igrset{ $\langle else \rangle$ } is executed.

```
/igr/if match set bookmark=\{\langle key \rangle\}\{\langle then \rangle\}\{\langle else \rangle\}
```

(no default)

If the $\langle key \rangle$ was defined by /igr/set matches, \igrsetmatchvalue^{\rightarrow P.53}, or \igrsetmatches^{\rightarrow P.53}, the corresponding value is put in the macro \igrmatchvalue and the current PDF bookmark is set to $\langle then \rangle$. If the $\langle key \rangle$ is unknown, the current PDF bookmark is set to $\langle else \rangle$.

Example 11: Map and match example; see from page 35

```
\incmultigraph[zerofill=4,paper=graphics,
  bookmark heading={Map and match example},
  bookmark heading options={level=subsection},
  bookmark options={level=subsubsection},
  if match set bookmark={\n}{\igrmatchvalue\ (\n)}{\nt},
  overlay page number at bottom,
  label={examatch.\n}]{exaimage-\nn.png}{1,...,150}
```

/igr/disable match

(no value, initially set)

Disables the statements by /igr/if match code, /igr/if match set, and /igr/if match set bookmark.

3.7 Overlays

```
/igr/overlay=\{\langle tikz \ code \rangle\}
```

(no default, initially unset)

Introduces arbitrary $\langle tikz \; code \rangle$ to be drawn over the included image. Note that the TikZ package [4] has to be loaded separately. To support positioning inside the picture, two tikz nodes named box and page are defined. box takes the dimensions of the included image and page takes the dimensions of the image or of the page depending on the usage of /igr/paper^{\rightarrow P.7}.

```
Example 12: Overlay; see page 38
\igrset{bookmark options={level=subsection}, paper=current}
\incgraph[bookmark={Picture with overlay},label={overlay},
  overlay={
    \node[draw=red,line width=3pt,fill=red,fill opacity=0.1,
          minimum width=14cm,circle] (circ) at (page.center) {};
    \node[fill=blue!5!white,below right,text width=4cm] (A)
          at ([xshift=1cm,yshift=-1cm]page.north west)
          {This included image is overlayed with |tikz| code.};
    \node[fill=green!10!white,above,text width=7cm] (B)
          at ([yshift=2cm]page.south)
          {Image Name: \nt\\Page number: \thepage\\
           Example~\ref{overlay.listing} on page~\pageref{overlay.listing}};
    \draw[line width=2pt,->] (A)--(circ);
    \draw[line width=2pt,green!50!black,dashed]
         (box.south west)--(box.south east);
    \draw[line width=2pt,->,green!50!black] (B)--(box.south);
  }]{example.jpg}
```

```
/igr/overlay page number at=\langle position \rangle
```

(no default, initially unset)

Overlays the page number at the given tikz $\langle position \rangle$.

```
/igr/overlay page number at bottom=\langle length \rangle
```

(default 1.5cm)

Overlays the page number at $\langle length \rangle$ above the bottom edge of the paper. See Example 1 on page 5 and the result on page 19.

```
/igr/overlay page number at top=\langle length \rangle
```

(default 1.5cm)

Overlays the page number at $\langle length \rangle$ below the top edge of the paper. See Example 7 on page 10 and the result on page 27.

N 2021-10-11

```
/igr/overlay page number options=\{\langle tikz\ options \rangle\} (no default, initially fill opacity=0.35,draw opacity=0.5,text opacity=1,inner xsep=1em, rounded corners,fill=white,draw=black)
```

Defines the TikZ node style for drawing the page number with one of the options above, e.g. /igr/overlay page number at

N 2021-10-21

```
/igr/overlay page number options app=\{\langle tikz\ options \rangle\} (no default, initially unset)
Appends the given \langle tikz\ options \rangle to /igr/overlay page number options.
```

```
/igr/no overlay
```

(no value, initially set)

Removes the overlay setting.

3.8 Miscellaneous

/igr/pagestyle= $\langle page \ style \rangle$

(no default, initially empty)

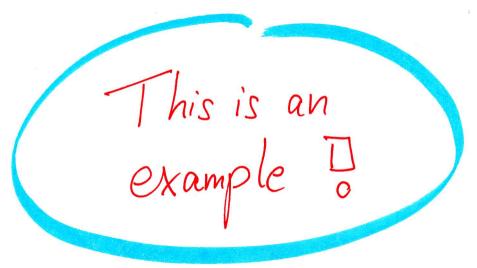

Sets the $\langle page\ style \rangle$ for the included graphics.

/igr/zerofill= $\langle digits \rangle$

(no default, initially 0)

For $\infty inc multigraph^{\to P.5}$, the current number element is filled up with leading zeros until the $\langle digits \rangle$ count is reached. If $\langle digits \rangle$ is 0 or 1, nothing is added. A $\langle digits \rangle$ value greater than 10 is treated as 10 which is the maximum number of possible digits. The result is accessible as \n , see $\infty inc multigraph^{\to P.5}$. Note that zerofill should be set to 0 if the list elements in $\infty inc multigraph^{\to P.5}$ are not numbers.

Page number: 38 Example 12 on page 17

4 Examples

4.1 Including some Scans to Standard Paper

In this scenario, we have some scans (or images from whatever source) which should be combined to a PDF document for our paperless office. The paper size of the PDF document is set to a standard paper (here: letter size) to allow the document to be printed.

The following Example 13 is a complete template for such a document. Here, the images example.jpg, exaimage-0001.png, exaimage-0037.png, and exaimage-0123.png are used for the resulting document. All included images are automatically bookmarked with the page number and the file name of the source image.

```
Example 13: incgraph-example-a.tex

\documentclass{article}
\usepackage{incgraph}

\igrset{paper=letter,
          zerofill=4,
          bookmark={Page \theigrpage\ (\nt)}
      }

\begin{document}%
    \incgraph{example.jpg}
    \incmultigraph{exaimage-\nn.png}{1,...,150}
\end{document}
```

The compiled result of this stand-alone source code is not found in this document but as a separate file in the documentation directory of the package.

4.2 Creating a Picture Book

For this example, we assume again that a bunch of image files is to be combined to a PDF document. This time, the target document should be read or displayed mainly on computer screens and may never be printed. Therefore, the paper size is set flexible for the current image.

The following Example 14 is a complete template for such a document. All included images are resized to a common width, but this is not necessary. The resulting document is considered as an e-book where the bookmarks are the most important navigation accessory. Single page inclusions with \incgraph \cdot P.5 are bookmarked directly, but multi-page inclusions with \incmultigraph \cdot P.5 can be bookmarked using the map-and-match feature of the package. The example shows a mixed usage of the macros. Note that the bookmarks of the multi-page part are matched with the numbers contained in the file names of exaimage-0001.png to exaimage-0150.png.

The compiled result of this stand-alone source code is not found in this document but as a separate file in the documentation directory of the package.

4.3 Reformatting from Letter to DIN A4 (and vice versa)

In this scenario, we assume to have a PDF document with the 'wrong' paper size. Here, incgraph-example-a.pdf has the letter format, but A4 paper is needed. incgraph is used to reformat to the desired paper size. Of course, it also works the other way around.

The following Example 15 is a complete template for such a document. The document gets the desired paper size with the /igr/paper^{-P.7} option. Then, all four pages of the original document are imported to the new paper size. Note that the actual document content itself is not resized because letter and DIN A4 are not so very different. If needed, the content could be shrunk or enlarged easily by adding a scale option for the underlying \includegraphics macro or by using /igr/autosize^{-P.14}.

```
Example 15: incgraph-example-c.tex

\documentclass{article}
\usepackage{incgraph}

\begin{document}%
\incmultigraph[paper=a4,
bookmark={Imported page \n\ of \nt}][page=\n]
{incgraph-example-a.pdf}{1,...,4}
\end{document}
```

The compiled result of this stand-alone source code is not found in this document but as a separate file in the documentation directory of the package.

4.4 Drawing on Full Paper Size

In the following examples, no external image is included to the document. Instead, the image (or whatever) is created inside the document and put on a separate page which could be resized or take the original document paper size.

In Example 16, a tikzpicture is drawn. The whole picture is put inside an inctext^{P.6} environment which puts the drawing on a separate page which gets the dimensions of the drawing.

```
Example 16: Creation of a special text page (resized)
\begin{inctext}[paper=graphics, bookmark=My special text page (resized)]
\begin{tikzpicture}%
  \coordinate (A) at (0,0); \coordinate (B) at (16,16);
  \path[use as bounding box,top color=Goldenrod!25,bottom color=Navy!25]
       (A) rectangle (B);
  \coordinate (C) at ([xshift=1cm,yshift=1cm]A);
  \coordinate (D) at ([xshift=-1cm,yshift=-1cm]B);
  \path (C) -- coordinate (E) (D);
  \draw[rounded corners=5mm, very thick, Navy] (C) rectangle (D);
  \path (C) |-
    node [pos=0.75,fill=white,draw=Navy,very thick,inner sep=3mm]
      {My Special Page \thepage} (D);
  \node[text width=10cm,align=flush center,font=\Large] at (E) {
    This is my special page. It takes the dimensions of the underlying
    |tikzpicture| as seen in the source code of Example~\ref{fullpaperdrawing1}
    on page~\pageref{fullpaperdrawing1}.};
\end{tikzpicture}
\end{inctext}
```

See the result on the following page.

This is my special page. It takes the dimensions of the underlying tikzpicture as seen in the source code of Example 16 on page 42.

In Example 17, nearly the same tikzpicture is drawn. This time, the current paper size is used which puts the drawing on a separate page but without resizing the paper. To draw seamlessly, the document paper size of 21cm to 29.7cm is used directly inside the tikzpicture.

```
Example 17: Creation of a special text page (fitted)
\begin{inctext}[paper=current, target=mytarget,
  bookmark=My special text page (fitted)]
\begin{tikzpicture}%
  \coordinate (A) at (0,0); \coordinate (B) at (21,29.7);
  \path[use as bounding box,top color=Goldenrod!25,bottom color=Navy!25]
       (A) rectangle (B);
  \coordinate (C) at ([xshift=1cm,yshift=1cm]A);
  \coordinate (D) at ([xshift=-1cm,yshift=-1cm]B);
  \path (C) -- coordinate (E) (D);
  \draw[rounded corners=5mm, very thick, Navy] (C) rectangle (D);
  \path (C) |-
   node [pos=0.75,fill=white,draw=Navy,very thick,inner sep=3mm]
      {My Special Page \thepage} (D);
  \node[text width=10cm,align=flush center,font=\Large] at (E) {
    This is my special page. It consumes the whole document paper size with
    an underlying |tikzpicture| as seen in the source code of
    Example~\ref{fullpaperdrawing2} on page~\pageref{fullpaperdrawing2}.};
\end{tikzpicture}
\end{inctext}
```

See the result on the following page.

Mrs Constitut De us 45	
My Special Page 45	
This is my special page. It consumes the	
whole document paper size with an	
underlying tikzpicture as seen in the source	
code of Example 17 on page 44.	

5 Basic Tool Box

In this section, some basic macros of the package are documented. It is assumed that most users will only need the macros from the user interface described in Section 2 and Section 3.

5.1 Page Size Commands

The following macros are auxiliary tools which wrap corresponding length registers from pdflatex and lualatex.

N 2021-10-12 \igrGetPageSize

Reads the current page dimensions and stores them into the macros \igrPageWidth and \igrPageHeight.

N 2021-10-12 \igrPageWidth

After using \igrGetPageSize, \igrPageWidth contains the current page width. This is \pdfpagewidth for pdflatex, \pagewidth for lualatex and a choice of \pdfpagewidth or \paperwidth for other engines.

N 2021-10-12 \igrPageHeight

After using \igrGetPageSize, \igrPageHeight contains the current page height. This is \pdfpageheight for pdflatex, \pageheight for lualatex and a choice of \pdfpageheight or \paperheight for other engines.

N 2021-10-12 \igrSetPageSize $\{\langle width \rangle\}\{\langle height \rangle\}$

Sets the current page dimensions to $\langle width \rangle$ and $\langle height \rangle$. In depends on the used engine, if a call to this command has success or not. This should work for pdflatex and lualatex.

5.2 Last Page Commands (Number of Pages)

The following macros are auxiliary tools which wrap corresponding functions from pdflatex and lualatex.

N 2021-10-18 \igrGetLastPage $\{\langle file \rangle\}$

Reads the last page (page count) from the given (PDF-) $\langle file \rangle$ and stores it into the macro \ightharpoonup and stores it into the macro \ightharpoonup and stores it into the macro

N 2021-10-18 \igrLastPage

After using \igrGetLastPage, \igrLastPage contains the last page of the currently tested file. This is \pdflastximagepages for pdflatex, \lastsavedimageresourcepages for lualatex and simply 1 for other engines.

5.3 Full Page Commands

$\langle text \rangle$

The $\langle text \rangle$ is put on a separate page which is resized to fit the dimensions of the $\langle text \rangle$. $\langle text \rangle$ may be single letter, an included picture, or any LATEX code. The page number is stored into **\theigrpage** and **\igrAutoTarget** holds a hyper target value for bookmarking. The style of the separate page is set to the content of the macro **\igrpagestyle** which defaults to 'empty' but can be redefined.

\ightharpoonup

The $\langle text \rangle$ is put in the center of a separate page which has the current document dimensions. $\langle text \rangle$ may be single letter, an included picture or any LATEX code. The page number is stored into **\theigrpage** and **\igrAutoTarget** holds a hyper target value for bookmarking. The style of the separate page is set to the content of the macro **\igrpagestyle** which defaults to 'empty' but can be redefined.

\ightharpoonup \igh

The $\langle text \rangle$ is put in the center of a separate page which is resized to the given $\langle width \rangle$ and $\langle height \rangle$. $\langle text \rangle$ may be single letter, an included picture or any LATEX code. The page number is stored into **\theigrpage** and **\igrAutoTarget** holds a hyper target value for bookmarking. The style of the separate page is set to the content of the macro **\igrpagestyle** which defaults to 'empty' but can be redefined.

\ightharpoonup

The next value for $\setminus igrAutoTarget$ is set to $\langle anchor \rangle$. This can be used for hand-made hyperlinks or bookmarks. An application for igrtargetset is found in Example 17 on page 44.

5.4 Box Commands

\ightharpoonup

The $\langle text \rangle$ is put into a TeX box named \igrbox. Additionally, some auxiliary macros are defined:

- \igrAutoTarget: unique value for a hyper target.
- \igrBoxWidth: width of the \igrbox.
- \igrBoxHeight: total height of the \igrbox.
- \igrBoxht: height of the \igrbox.
- \igrBoxdp: depth of the \igrbox.

```
\igrboxset{This is an example}
|\igrAutoTarget| = \igrAutoTarget, |\igrBoxWidth| = \igrBoxWidth,
|\igrBoxHeight| = \igrBoxHeight,\\
|\igrBoxht| = \igrBoxht, |\igrBoxdp| = \igrBoxdp;

\igrAutoTarget = igr-24, \igrBoxWidth = 76.42221pt, \igrBoxHeight = 7.95pt,
\igrBoxht = 6.2pt, \igrBoxdp = 1.75pt;
```

\igrboxcenter

The current content of the \igrbox is put in the center of a separate page which has the current pdfpage dimensions.

The style of the separate page is set to the content of the macro \igrpagestyle which defaults to 'empty' but can be redefined. Note that a \clearpage or similar has to be inserted before this command.

\igrboxtikz

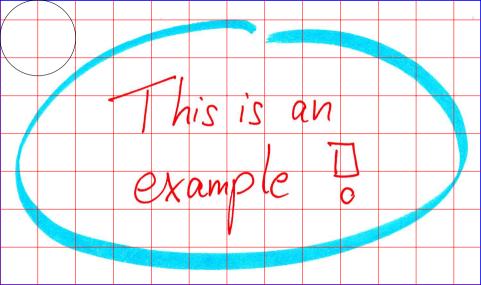

The current content of the \igrbox is embedded into a \node command from the tikz package [4] which has to be loaded separately. Also, the bounding box is adjusted to the \igrbox.

To support positioning inside the picture, two tikz nodes named box and page are defined which both take the dimensions of the \igrbox.

```
\\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\lightarrow{\ligh
```

The boxing macros can also be used nested (see the result on the following page):

```
\igrpage{\igrboxset{\includegraphics{example.jpg}}%
  \begin{tikzpicture}%
  \igrboxtikz%
  \draw[blue,very thick] (0,0) rectangle (\igrBoxWidth,\igrBoxHeight);
  \draw[red] (0,0) grid (\igrBoxWidth,\igrBoxHeight);
  \draw[black] ([xshift=1cm,yshift=-1cm]page.north west) circle (1cm);
  \end{tikzpicture}}
```

\igrboxtikzpage

This is an alias for $\ightharpoonup \operatorname{P.49}$.

\igrboxtikzcenter

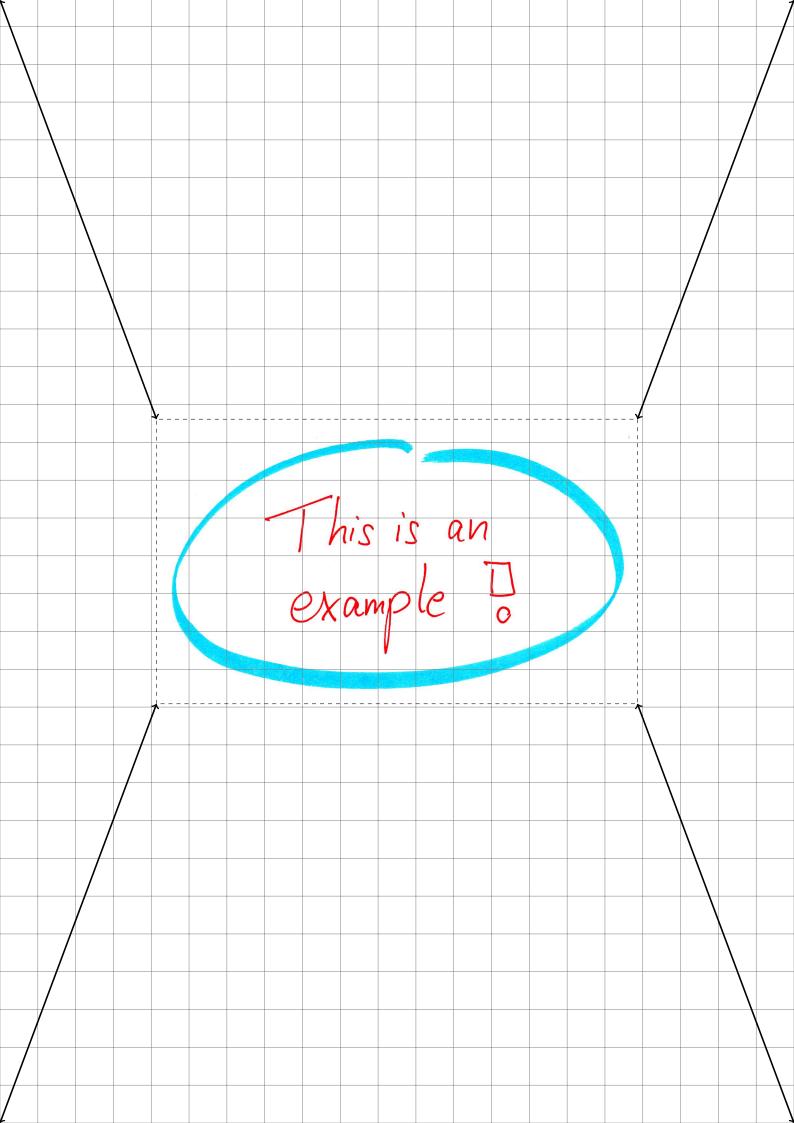

The current content of the \igrbox is embedded into a \node command from the tikz package [4] which has to be loaded separately. This node is placed in the center of a bounding box which takes the current page dimensions. Afterwards, \igrBoxWidth and \igrBoxHeight are redefined to the dimensions of the total page.

To support positioning inside the picture, two tikz nodes named box and page are defined. box takes the dimensions of the \igrbox and page takes the dimensions of the tikzpicture.

```
\igrcenter{\igrboxset{\includegraphics{example.jpg}}%
  \begin{tikzpicture}%
  \igrboxtikzcenter%
  \draw[help lines] (0,0) grid (\igrBoxWidth,\igrBoxHeight);
  \draw[dashed] (box.south west) rectangle (box.north east);

\draw[very thick,<->] (page.north west)--(box.north west);
  \draw[very thick,<->] (page.north east)--(box.north east);
  \draw[very thick,<->] (page.south west)--(box.south west);
  \draw[very thick,<->] (page.south east)--(box.south east);
  \draw[very thick,<->] (page.south east)--(box.south east);
  \end{tikzpicture}}
```

See the result on the following page.

5.5 Map and Match Commands

\igrsetmatchvalue $\{\langle key \rangle\} \{\langle value \rangle\}$

The given $\langle key \rangle$ is mapped to the given $\langle value \rangle$. Later, this $\langle value \rangle$ can be retrieved by \igrifmatch.

```
\igrsetmatchvalue{my key A}{my value A}
\def\keytester#1{\igrifmatch{#1}{Hurray: '\igrmatchvalue'}{'#1' unknown}}
\keytester{something}\\
\keytester{my key A}

'something' unknown
Hurray: 'my value A'
```

\ightharpoonup \ightharpoonup \ig

The $\langle list \rangle$ is a comma separated list of $\langle key \rangle = \langle value \rangle$ pairs. On every pair, the \ightherefore ignormation is applied.

```
\igrsetmatches{my key A = my value A, bar = Shakespeare}
\def\keytester#1{\igrifmatch{#1}{Hurray: '\igrmatchvalue'}{'#1' unknown}}

\keytester{something}\\
\keytester{bar}\\
\keytester{my key A}

'something' unknown
Hurray: 'Shakespeare'
Hurray: 'my value A'
```

$\ightharpoonup \figure{1.5cm} \label{linear} \label{linear} $$ \ightharpoonup \figure{1.5cm} \label{linear} $$ \ightharpoonup \figure{1.5cm} \label{linear} $$ \ightharpoonup \figure{1.5cm} \label{linear} $$ \ightharpoonup \figure{1.5cm} \label{linear} $$ \label{linear} $$ \ightharpoonup \figure{1.5cm} \label{linear} $$ \label{linear$

If a $\langle key \rangle$ was defined by \iggreetmatchvalue or \iggreetmatches, the corresponding value is put in the macro \iggreetmatchvalue and the $\langle then \rangle$ code is executed. If the $\langle key \rangle$ is unknown, the $\langle else \rangle$ code is executed.

```
\igrsetmatches{1 = January, 2 = February, 3 = March, apr = April}
\def\monthname#1{\igrifmatch{#1}{The name of month #1\ is \igrmatchvalue.}{%
   You are kidding.}}

\monthname{1} \monthname{foo} \monthname{2}\\
\monthname{3} \monthname{apr} \monthname{35}}

The name of month 1 is January. The name of month foo is bar. The name of month 2 is February.
The name of month 3 is March. The name of month apr is April. You are kidding.
```

5.6 Zero Filling Commands

\ightharpoonup \igh

With this command, a new $\langle macro \rangle$ can be defined which takes a non negative number as parameter. This number is filled up with leading zeros until the $\langle digits \rangle$ count is reached. If $\langle digits \rangle$ is 0 or 1, nothing is added. A $\langle digits \rangle$ value greater than 10 is treated as 10 which is the maximum number of possible digits.

```
\igrmakezerofill{\myfill}{0}
\myfill{7}, \myfill{12}, \myfill{934}, \myfill{665234}.\\
\igrmakezerofill{\myfill}{3}
\myfill{7}, \myfill{12}, \myfill{934}, \myfill{665234}.\\
\igrmakezerofill{\myfill}{5}
\myfill{7}, \myfill{12}, \myfill{934}, \myfill{665234}.\\
\igrmakezerofill{\myfill}{9}
\myfill{7}, \myfill{12}, \myfill{934}, \myfill{665234}.\\
\igrmakezerofill{\myfill}{30}
\myfill{7}, \myfill{12}, \myfill{934}, \myfill{665234}.\\
\igrmakezerofill{\myfill}{30}
\myfill{7}, \myfill{12}, \myfill{934}, \myfill{665234}.\\
\igrmakezerofill{\myfill}{30}
\myfill{7}, \myfill{12}, \myfill{934}, \myfill{665234}.\\
