Implementation

These document classes can only be used with L^AT_EX 2_ε, so we make sure that an appropriate message is displayed when another T_EX format is used.

```

1 \NeedsTeXFormat{LaTeX2e}[2020-10-01]

```

We define some constant token lists immediately useful.

```

1 \ExplSyntaxOn
2 \tl_const:Nn \c__letgut_Lettre_tl { \emph{ Lettre } }
3 \tl_const:Nn \c__letgut_Lettres_tl {
4   \c__letgut_Lettre_tl \emph{ s }

Now, we can announce the class name and its version :

```

Messages

We specify the messages come from a class, which is letgut (see <https://github.com/latex3/latex3/issues/887>).

```

1 \prop_gput:Nnn \g_msg_module_type_prop { letgut } { Class }

```

Some messages are declared for future use.

Skips (lengths with rubber components)

The following skips, borrowed from the standard classes, are specified in ex unit, which depends on the font used and hence have to be specified after the class has been loaded; in fact, we postpone this at the end of the preamble, when the font is specified (thanks to `\setmainfont`).

```

Class and package loading

The class `letgut` is based on the `article` class. It is by default two sided because of the alternating headers, and will be typeset with 11pt as global font size.

```
1 \LoadClass[twoside,11pt]{article}
```

We now load some packages.

- The class `letgut` will have to be used with LuaLaTeX. Hence the font selection package for XeLaTeX and LuaLaTeX.

```
1 \RequirePackage{fontspec}
```

- For subliminal refinements towards typographical perfection.

- ```

1 \RequirePackage[
2 , stretch=30
3 , shrink=25
4 , letterspace=150
5]{microtype}

```
- Help in implementing paragraph layouts where the paragraphs are separated by a vertical space instead of (or in addition to) indenting them.
- ```

1 \RequirePackage{parskip}

```
- Extensive control of page headers and footers in L^AT_EX 2_ε.
- ```

1 \RequirePackage{fancyhdr}

```
- Flexible and complete interface to document dimensions.
- ```

1 \RequirePackage[a4paper]{geometry}

```
- Enhanced support for graphics.
- ```

1 \RequirePackage{graphicx}

```
- Biolinum font.
- ```

1 \RequirePackage{biolinum}

```
- Extending the array and tabular environments.
- ```

1 \RequirePackage{array}

```
- Completely customisable TOCs.
- ```

1 \RequirePackage{etoc}

```
- Control layout of itemize, enumerate, description, and design our own lists.
- ```

1 \RequirePackage{enumitem}

```
- Select alternative section titles.
- ```

1 \RequirePackage{titlesec}

```
- Driver-independent color extensions.
- ```

1 \RequirePackage[table]{xcolor}

```
- Several logos and ornaments.
- ```

1 \RequirePackage{fourier-orns}

```
- Drawing of Vectorian ornaments.
- ```

1 \RequirePackage{pgfornament}

```
- Control float placement.
- ```

1 \RequirePackage[section, above]{placeins}

```
- Sophisticated verbatim text.
- ```

1 \RequirePackage{fancyvrb}

```
- Publication quality tables in L<sup>A</sup>T<sub>E</sub>X.
- ```

1 \RequirePackage{booktabs}

```
- Context sensitive quotation facilities.
- ```

1 \RequirePackage{csquotes}

```
- Mathematical tools to use with (and which loads) `amsmath`.
- ```

1 \RequirePackage[fleqn]{mathtools}

```
- Better accessibility support for PDF files. This package is used because we want the material added to the background (banner on the first page and draft watermark) to be not selectable in order to let the reader who wants to copy the interesting text be able to select it.
- ```

1 \RequirePackage{accsupp}

```
- A comprehensive (SI) units package.
- ```

1 \RequirePackage{siunitx}

```

— Additional T_EX-family logos (which loads and extends `hologo` which is collection of logos with bookmark support).

```
1 \RequirePackage{bxtexlogo}
```

— Coloured boxes, for L^AT_EX examples and theorems, etc.

```
1 \RequirePackage{tcolorbox}
```

— Compile T_EX code stand-alone or as part of a document.

```
1 \RequirePackage[group=false, subpreambles, sort]{standalone}
```

— Attach arbitrary files to a PDF document.

```
1 \RequirePackage[icon=Paperclip]{attachfile2}
```

— Expandable macros to extract the data from references and allow counter assignments or calculations.

```
1 \RequirePackage{refcount}
```

— Select colors with proper WCAG color contrast.

```
1 \RequirePackage{ninecolors}
```

— Typeset tabulars and arrays with LaTeX3 (for the alert boxes typeset as simple tabulars).

```
1 \RequirePackage{tabularray}
```

— Multilingual support for Plain T_EX or L^AT_EX.

```
1 \RequirePackage[english, french]{babel}
```

— Intelligent page references.

```
1 \RequirePackage[nospace, french]{varioref}
```

— Macros for Euro sign.

```
1 \RequirePackage[right]{eurosym}
```

— Typeset source code listings using L^AT_EX.

```
1 \RequirePackage{listings}
```

— Modifying the layout of floats.

```
1 \RequirePackage{floatrow}
```

— Sophisticated Bibliographies in L^AT_EX.

```
1 \RequirePackage[
2   sorting=none,
3   datamodel=letgut,
4   citestyle=letgut
5 ]{biblatex}
```

— Typeset acronyms.

```
1 \RequirePackage{acro}
```

— Allow URL breaks at any alphanumerical character.

```
1 \RequirePackage{xurl}
```

The following packages have to be the last ones loaded. So we ensure this by loading them just before the beginning of the document :

```

— Depending on some chosen class options, some packages have to be loaded, notably before package `hyperref` is loaded, and actions are taken accordingly.

— If the ‘draft’ mode (default) is on, we load the package `lua-typo` which highlights typographical flaws with LuaLaTeX. For the moment, the package `lua-typo` isn’t loaded since the ‘`luacolor`’ package it loads currently does not work well in `shipout/background` (see <https://github.com/ho-tex/luacolor/issues/4>).

```

Currently, we can’t use `l3color`’s `\color_fill:n` (see <https://github.com/ho-tex/luacolor/issues/4#issuecomment-848774260>) and we have to rely on `xcolor`’s `\color`.

- `draft~/~/final` depending on the state of the document,
- `paper~/~/screen` depending on the way the document will be read,
- `number` for the number of the issue,
- `date` for the date of the issue, either empty (hence the current (month) date) or at the format `YYYY-MM` or as free input,
- `pagecolor` (relevant only with the (default) screen load time option) for a color of the page other than the default one,
- `allcolorslinks` for the color of (all) the links,
- `membership-reminder` that typesets a membership reminder on the first page,
- `editorial` depending on the editorial is wanted or not,
- `infomations` depending on the GUTenberg informations are wanted or not,
- `detailedtoc` depending on the automatic ToC is wanted maximally (until subparagraphs) detailed or not.

“Title” and marks

We redefine `\@title` in order to make it empty. Hence we can later test if the `\title` has been populated by the user (thanks to `\title`) and, if so, we will (automatically) display on the first page and headers the provided title instead of the number and the date (see below).

```
1 \tl_gclear:N \@title
```

At the end of preamble, we put the `\@title` (empty or populated by the user) into `\g__letgut_@title_str` for later tests.

```

First page handling

The first page is special as it should automatically contain certain elements :

- the banner,
- either the number and the date of the issue, or a given title,
- the table of contents,

- the editorial,
- the membership reminder.

The first page is inserted only if the target audience is the readers of the Lettre.

```

1 \AddToHook{begindocument/before}{
2   \bool_if:NT \g__letgut_for_readers_bool {
1   \file_if_exist:nTF {\c__letgut_banner_file_tl.pdf}{

9         }
10        \end{picture}
11      }
12    }{

```

The pagecolor option is possibly set (with `\AddToHook{begindocument/before}`) and the page color chosen has to be used for the letters of the banner so the following code has to be postponed after the former (hence here `\AddToHook{begindocument}` and with `\AddToHook{begindocument/before}`).

Here, we insert the title, but don't rely on `\maketitle` because it lets to `\relax` the command `\title` which is used later as new sectioning levels for the titles of the articles of the Lettre. So we emulate the interesting part of the `\maketitle` command (borrowed from `article.cls`).

```

13   {\large \@date}%
14 \end{center}%
15 \par
16 \vskip 1.5em
17 }
```

— No headers on the first page. This has to be inserted after the previous (customized) `\maketitle` since this command inserts a `\newpage` which would ruin the effort of `\thispagestyle{empty}` if inserted before.

```
1  \thispagestyle{empty}
```

— The table of contents is automatically added and has a bookmark entry. By default only the titles of the articles are shown (but the bookmarks have their natural depth) but the `detailedtoc` option make its depth until subparagraphs (which may be useful in order to check the structure of the Lettre).

We define the command `\lettrenumber` that displays the number of some *Lettre* issue :

- preceded by “n°” if used starred,
- by default the current one,
- possibly shifted w.r.t. the current one, depending on the first token of the optional argument :
 - if it is not `.`, `+` nor `-` : this argument (pretty useless : it is easier to directly type the desired number),
 - if it is `.` : the current number of the *Lettre* (pretty useless : it is easier to just not use the optional argument),
 - if it is `+` or `-` followed by a number : the current number of the *Lettre*, shifted by what is specified.

Acronyms

The following command let us define acronyms. The arguments are as follows :

- #1 : optional argument that let us override the default settings of this command,
- #2 : the uppercase version of both the id and the short form of the acronym,
- #3 : the long form (in French if #4 has -NoValue-, in English otherwise),
- #4 : the French translation of an English acronym.

The first occurrences of the acronyms will be displayed in their short forms, with the long ones in footnotes. But what about acronyms whom first occurrences arise within footnotes? We want them to be displayed as their short forms followed by their the long form in parentheses. For this, we have to add a boolean at the beginning (and reversed at the end) of the `\footnote` command to know whether we currently are in a footnote or not and display the acronym accordingly.

BTW, we hack the `\footnote` command in order to mimic the multiple option of the `footmisc` package (consecutive `\footnote` commands make their corresponding footnote marks separated by commas). See <https://tex.stackexchange.com/a/62091>.

Input of articles

We create our own `\input` command for the articles of the Lettre with the following characteristics :

- The previous style is applied automatically. Hence, the keywords defined in a previous file (by loading some particular (La)TeX dialects, i.e. control sequences and keywords specific to some class or packages) won't interfere with the ones of the current file.
- All the acronyms are reset (each acronym is developed at its first occurrence).
- The source file of the article is attached to the PDF (if desired, otherwise, use the starred version).

We first create a function that attach to the PDF a file only if it exists in the current directory and is non empty. This will be applied to both the `localconf.tex` and `pre-documentclass.tex` files below.

Because of a current issue involving `parskip` and `listings` (<https://github.com/FrankMittelbach/fmitex-parskip/issues/3>), we have to set the skip below the displayed listings to a (almost) zero length. We do the same for the above skip.

```

1   aboveskip={0\p@ \@plus 6\p@},
2   belowskip={0\p@ \@plus 6\p@},

We add our own language files taken in account by the package `listings`. They will be considered after the other usual ones, if found. They are searched firstly in the current directory, secondly in the parent directory, thirdly in the TDS.

The `listings` package defines some of the LaTeX’s environments as keywords of order 1. This would force us to do the same in our own language driver file but would ruin our effort to stylize in a special way (in red) other keywords (see `otherkeywords={...}`) that are stylized as keywords of order 1. Hence, we delete these keywords of order 1 and will add them as keywords of order 2 like all the environments in our own language driver file (in the extendedLaTeX dialect that we load by default).

```

1 deletekeywords={%
2   array,center,displaymath,document,enumerate,eqnarray,%
3   equation,flushleft,flushright,itemize,list,lrbox,math,minipage,%
4   picture,sloppypar,tabbing,tabular,trivlist,verbatim,%
5 },%
1   literate=*%
2   {\}\}\{\{\color{__letgut_texcs}\textbackslash\textbackslash}\}\}\{2}%
3   {\}\}\{\{\textcolor{__letgut_math}\textbackslash[}\}\}\{2}%
4   {\}\}\{\{\textcolor{__letgut_math}\textbackslash}\}\}\{2}%
5   {\$}\{\{\textcolor{__letgut_math}\{\$}\}\}\{1}%$
6 }

```

We first define some colors used in the listings and examples.

```

1 \definecolor{__letgut_backgroundCode}{cmyk}{0,0,0,0.04}
2 \definecolor{__letgut_borderCode}{cmyk}{0,0,0,0.2}
3 \definecolor{__letgut_foregroundLinenumber}{cmyk}{0,0,0,0.5}
4 \definecolor{__letgut_foregroundMention}{cmyk}{0,0,0,0}
5 \definecolor{__letgut_backgroundResult}{cmyk}{0,0,0,0}

```

For the listings and examples, we rely on package `tcolorbox`, and more specifically on some of its libraries.

```
1 \tcbuselibrary{listings,breakable,skins,hooks,documentation}
```

We want some common settings for all the `~tcolorbox~`s.

```

The package `tcolorbox` listings defined below make use of package `cleveref`'s features. But, since the latter package is loaded `\AddToHook{begindocument/before}`, the same is needed for these listings.

We now define the environments that let us display :

3   crefname={exemple}{examples}
4 ]{ltx-code-result}{ !0{ } }{%
5   __letgut_code_result,

1. with the result obtained externally :

```
1 \DeclareTCBListing[

3   crefname={exemple}{examples}
4 ]{ltx-code-external-result}{ 0{ } m }{%

The examples with code and result side by side will be floating but we want the ones being of their call out pages to have before and after them a reduced vertical glue (`\g__letgut_reduced_intextsep_dim`). Hence we store the original glue (`\intextsep`) in a custom one (`\g__letgut_orig_intextsep_dim`) in order to retrieve the original skip for floats other than these ones.

```
1 \skip_const:Nn \c__letgut_orig_intextsep_skip {\intextsep}
2 \skip_const:Nn \c__letgut_reduced_intextsep_skip {
3   4\p@ \@plus .667\p@ \@minus .667\p@
4 }

Since the syntax highlighting is reset at each `\input`, the `ltx-code-*` environments above provide syntax highlighting only for the commands of the \TeX dialects specified in the class. So we provide a specific command that let us specify (the dialects of) the main language (\TeX by default) for which we want syntax highlighting. This assumes that the commands and keywords of these packages are listed (properly, according to the listings package syntax) in the `lstlang0.sty` or `letgut-lstlang.sty` files.

Local config file

Each issue of the Lettre requires certain local configurations : configuration dedicated to the issue in question, particular packages used in the articles, specific configurations of the package `listings`, etc. In order to not clutter the main fichier `.tex` of the Lettre, a local configuration file named `localconf.tex`, if present in the current directory, is automatically included at the end the preamble. And since this file is input in the current category régime (`\ExplSyntaxOn`), a `\ExplSyntaxOff` is automatically inserted at its beginning.
