

# **RFC Editor Report**

IETF 110

# xml2rfc Resources

How to run it:

<https://xml2rfc.tools.ietf.org/experimental.html> (web service)

<https://pypi.org/project/xml2rfc> (local installation)

Current v3 vocabulary:

<https://xml2rfc.tools.ietf.org/xml2rfc-doc.html>

The v3 FAQ:

<https://www.rfc-editor.org/materials/FAQ-xml2rfcv3.html>

xml2rfc mailing list:

<https://www.ietf.org/mailman/listinfo/xml2rfc>

Bug tracker for xml2rfc:

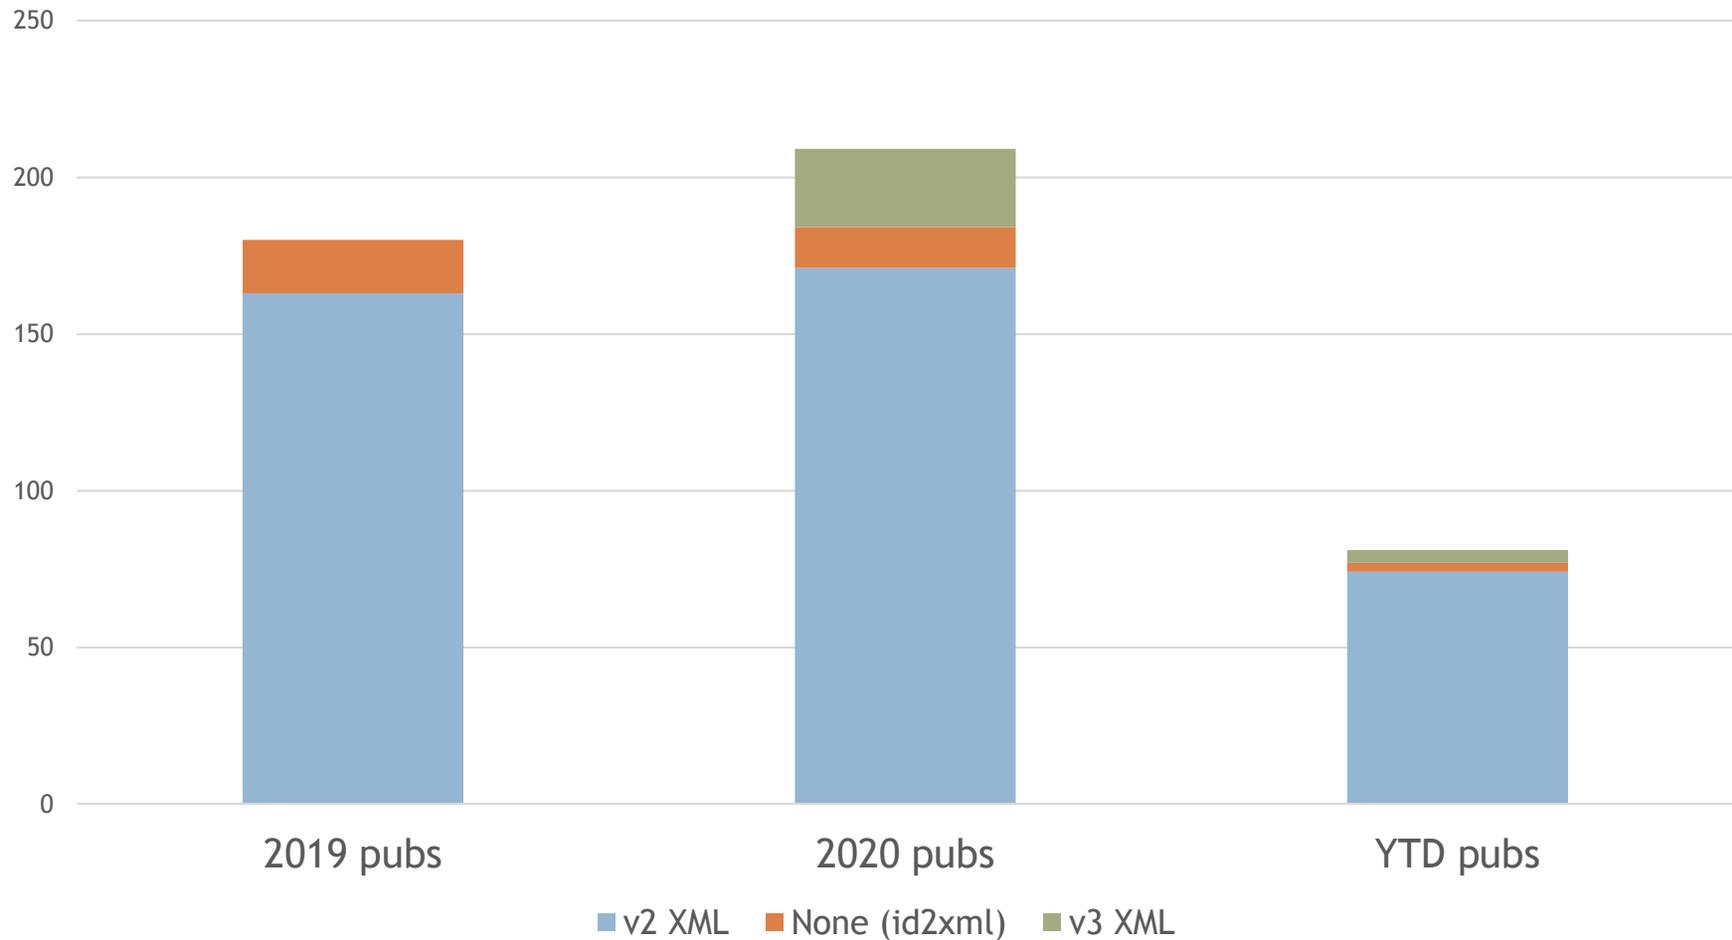

<https://trac.tools.ietf.org/tools/xml2rfc/trac/report/1>

# What's involved with v3 formatting?

Some of the actions by the RPC to improve the v3 XML:

- Conversion of <artwork> to <table>
- Table adjustments (e.g., use of rowspan / colspan)
- Conversion of <artwork> to <list>
- Conversion of <artwork> to <sourcecode> and appropriate value for type
- List cleanup (e.g., use of definition lists, nested lists)
- Cleanup of odd tagging resulting from the conversion tool
- <xref>s - some hardcoded references to sections, document titles, RFC numbers, and combinations thereof are not always straightforward to update
- Line limitations - adding line breaks to <sourcecode> that extends beyond the 69-character limit (or asking the authors to add them)

# What's next?

- Working with XML Vocabulary and Style Guide Change Management team  
Goals:
  - Solidify v3 vocabulary
  - Define minimum set of v3 XML for RFCs
  - Capture info in documentation (7991bis, schema documentation, v3 FAQ, Style Guide as appropriate)
- Looking for ways to improve the AUTH48 process
  - How can it be modernized and maintain an archive of changes and approvals
  - Have asked authors of 8829 for input about using GitHub for AUTH48
  - Experiment has been run twice; details are in the [RSE wiki](#)
- Focusing on cluster management
  - Improve communication with authors and ADs when clusters grow large; can a cluster be broken into subclusters?
  - Continue experimenting with cluster-wide mailing lists
  - Internal review of different ways to document and share info that may be relevant for other docs in cluster
